Passivhaus, low carbon and health

Developing low energy, healthy, affordable housing

The Welsh Government has set ambitious targets to reduce carbon emissions (80% by 2050). Passivhaus offers a robust way to radically reduce energy consumption in the built environment whilst also eliminating fuel poverty and improving occupant health outcomes.

Specific objectives for the event are:

- Understand the low/ zero carbon agenda and where the Passivhaus standard fits
- What the different approaches deliver in terms of energy use, health and wellbeing

Programme

13.15 – 13.45: Registration
